## SKILLS

|           |                                                                                                                                                                               |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FRONTEND  | React, JavaScript, TypeScript, Astro, CSS, semantic HTML, WCAG 2.2, W3C APG patterns                                                                                          |
| BACKEND   | Express, REST APIs, Integration testing                                                                                                                                       |
| DATABASES | SQL (SQLite, Postgres via Supabase), schema design, Knex migrations + seeds, indexing strategies                                                                              |
| TOOLING   | Vite, Vitest, Playwright, axe-core, Git, Cloudflare Pages, Vercel, Anthropic / OpenAI APIs (used in my Dev Academy ai-chatbot project)                                        |
| PRACTICE  | TDD where it helps, scaffold-first learning, design-doc-driven work, accessibility audits. Currently learning: AI agent + worker patterns for the Learning Companion Project. |

## PROJECTS

**Atlas — visual concept library.** A bootcamp shell ( `art-gallery` ) reworked into a living, accessibility-first concept library. [vixenz.dev/work/atlas](https://vixenz.dev/work/atlas)

**The MTG Project.** Eight design docs for a Commander deck-builder. Tech stack, schema, and architecture fully designed. [vixenz.dev/work/mtg-project](https://vixenz.dev/work/mtg-project)

**Avalúne Compendium.** Express + Knex + SQLite practice backend with real worldbuilding canon. [vixenz.dev/work/avalune-compendium](https://vixenz.dev/work/avalune-compendium)

**Realmstack.** A co-built project with my husband. Cloudflare Workers (D1, KV, R2), TypeScript. Doc-led planning phase — declaration, explainers, and research docs taking shape; implementation begins from there. [realmstack.world](https://realmstack.world)

## EDUCATION

**Dev Academy Aotearoa — AI Launchpad** — 16-week agentic coding programme: multi-agent workflows on production codebases, industry placement with a NZ tech company. 27 July – 13 November 2026.

**Dev Academy Aotearoa** — full-stack web development bootcamp. Completed 2026.

## BACKGROUND

This is a career change. I spent the last decade in customer service and hospitality. The skills I'm bringing across: working with people under pressure, real-time problem-solving, communication, and reading what someone needs before they say it — the same instinct that drives accessibility-first design.
